

FIGHT THE BITE

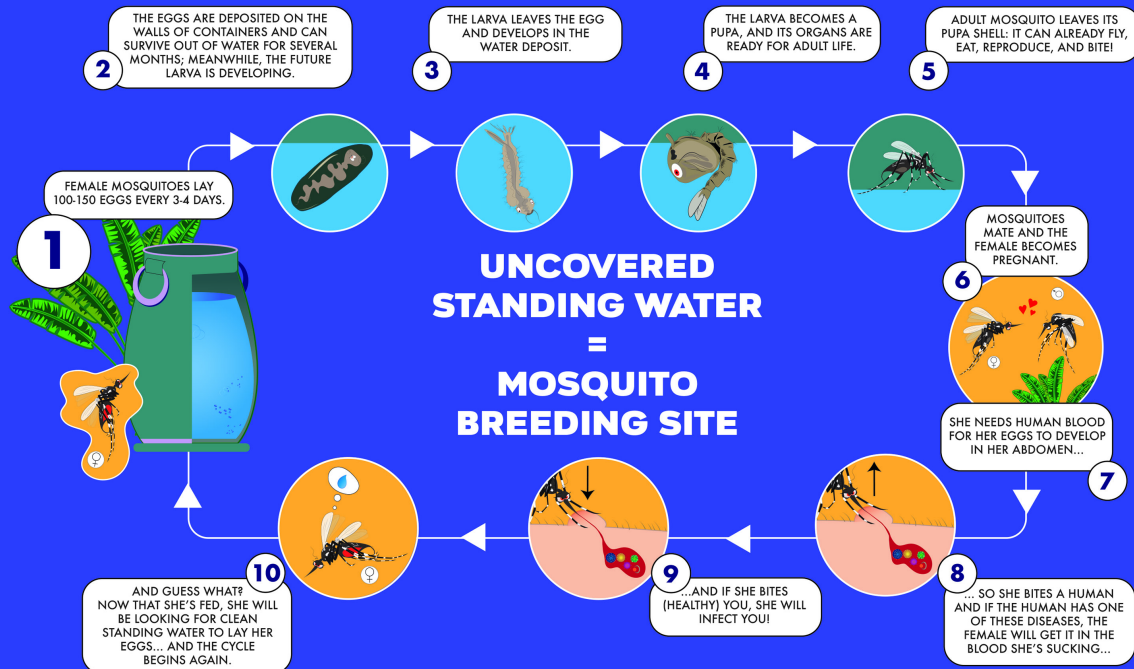

DESTROY MOSQUITO BREEDING SITES

MOSQUITO AWARENESS WEEK

DON'T LET THEM BREED !

The KEY is preventing mosquitoes from finding clean standing water; they only need a small amount to lay their eggs. Vases, tires, barrels, and any other container with water become an incubator for eggs to develop.

Mosquito bites can transmit serious diseases.

DENGUE

DISEASE THAT REQUIRES REST AND, IN SERIOUS CASES, CAN LEAD TO DEATH.

ZIKA

DISEASE THAT CAN LEAD TO SERIOUS COMPLICATIONS FOR PREGNANT WOMEN AND THEIR BABIES.

CHIKUNGUNYA

DISEASE THAT CAN CAUSE CHRONIC, SEVERE JOINT PAIN.

YELLOW FEVER

DISEASE THAT CAN LEAD TO ORGAN MALFUNCTION. THERE IS A VACCINE TO PREVENT IT. ASK YOUR DOCTOR!

MALARIA

DISEASE THAT CAN BE SERIOUS IF NOT TREATED IN TIME.

Have you been bitten? Do you have any or all of these symptoms? DO NOT medicate yourself. See a doctor.

FEVER

MUSCLE PAIN

NAUSEA OR VOMITING

HEADACHE

JOINT PAIN

CHILLS

SKIN RASH

LACK OF APPETITE

WATERY EYES

Take action!

Prevent mosquitos from breeding or biting you.

Observe your surroundings: A mosquito breeding site can range from an uncovered barrel to a small container that has accumulated water. If you see one, report it and help eliminate these sites.

Don't leave containers out in the yard where they can accumulate water; and don't go near neglected areas with uncut grass, garbage, or vacant lots. These can be mosquito breeding sites.

Use repellent on skin and clothing. Ask an adult for information and help.

Share this information with your friends and help them take action.
