

*Jaundice, a yellowing of the skin and the whites of the eyes, is a common symptom of yellow fever.*

have sustained little or no damage to their organs as a result of the infection.

Patients who develop severe infections will experience a short period of time where the infection subsides. During this time—one to three days—the patient is relieved from the effects of the symptoms. After this period, the infection symptoms return and can progress to a deadly outcome.

Common symptoms of classic yellow fever including abdominal pain, fever, jaundice (yellowing of the skin and the whites of the eyes), vomiting of blood, dehydration (lack of fluids in the body), abnormal liver function, abnormal kidney function, and absolute exhaustion.
